Where do
you see yourself in
10 years?

Ten years from now, I see myself as an engineer working in either test and validation or manufacturing at an aerospace company. I also hope to own a dog and a house.

- Victoria Fuller

Hopefully I'll be working at an aerospace company as an engineer, but I don't have a vision for where or anything like that.

- Holly Davis

In ten years, I see myself back on the east coast working as an engineer!

-Adam Fleischman

In 10 years, I would like to see myself working for an aerospace company in New York City. I hope to then earn my master's to help myself move to London to work in Formula 1.

- Matt McBride

In 10 years I see myself living somewhere by the beach and doing marketing in the beauty or fashion industry. I hope to travel, have a cat and maybe even kids!

- Gabbie Voelker

I see myself as a successful engineer still working in aviation on the manufacturing side, in a supervisor position. I hope to live in a city close to the ocean or mountains. I will be well traveled and visit 15 countries by then.

- Sam Stone

I see myself as a highly skilled aerospace engineer working within a major aerospace organization, supporting our military aircraft and spacecraft programs. I'm hands on with advanced hardware, contributing to the performance, reliability, and safety of cutting edge jets and space systems.

- Austin Schwantes

In 10 years I see myself living in California still working for an aerospace company. My dream is to eventually work on rockets, so I hope I'm doing that/doing something adjacent to that.

- Ava Brouster

I would like to have graduated from college and potentially grad school and have spent time working in the engineering industry. I think it would be cool to live abroad for a time, specifically in a Latin American country.

- Isabel Draper

I see myself hopefully living somewhere warm and working in marketing. I hope to visit all seven continents by then!

- Ella Hammerschmidt

I hope to be in a Senior Designer or Manufacturing role. I am interested in logistics and manufacturing operations as well. As an industrial design student, my interests are very broad with one of them being aerospace. If I am lucky, I hope to possibly one day open my own design contracting firm.

- Rene Tetter

I see myself back in Saint Louis, working in marketing for a golf company. Eventually I would like to create my own golf equipment/putter company.

-Jack Dawson

In Ten years I see myself Owning a small welding and fabrication business somewhere here in Missouri.

- Conner Oetting

I see myself well into my engineering career, working in a big city in a company involved with biotech. I wish to also be well into my goal of being involved in academia, specifically acquiring a Ph.D. and publishing engineering research.

- Zenas Kitane

I hope to be working in aerospace engineering design at a company who's culture I enjoy. I want to live in Saint Louis and also make sure I'm building a life outside of work, traveling and spending time outdoors.

- Charlie Eisenhauer

I see myself having a home nearby my family and staying close to my friends. Career-wise, I see myself working in the environmental or energy sector of engineering. I would be traveling to different areas, helping create machines that will support communities or improve energy efficiency, and helping the environment.

- Samuel Le

In 10 years I see myself living on the East Coast and as a chemical engineer working for a company just like Essex.

- Wyatt Irvin

I will be an Aerospace Engineer working on exciting projects that challenge me, solving real world problems, and continuing to grow and learn through hands-on projects and make an impact! I plan to travel and own a cow named Millie!

- Reagan Mattison

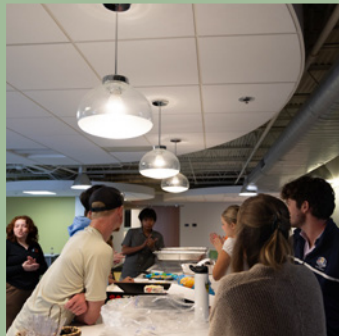

In 10 years I see myself working in the semiconductor/optoelectronics field.

- Alonso Jones
